Secure, everywhere

Security can be confusing, daunting, expensive or just time consuming. Many providers want to sell you a single, costly solution that fixes one problem while leaving other areas exposed.

That's where Inverto Azure Baseline Security and Advanced Security plans come in.

Deploy security across all areas whether its in Azure, multi cloud or on premise. Simple pricing structures mean you can quickly be up and running and more importantly, protected.

Azure Baseline Security

What is it?

Inverto Azure Baseline Security is a fully managed set of policies and best practices to protect your business-critical resources within Azure.

Azure Baseline Security

Who is it for?

ABS is for everyone. From smaller teams looking to manage costs, to larger enterprises with strict security requirements. It's a fully scalable managed offering that comes at a fixed price, so you stay on top of security expenditure.

Azure Baseline Security

When should I use it?

- Consider using Inverto Azure Baseline Security when...
- You have security requirements but can't afford the high costs
- You have strict governance in place that needs to be managed
- Development and test environments

Policies

You must be wondering what the 100 policies and best practices are? Allow us to show you some...

- MFA for owners
- Remove guest owner accounts
- Advise if any vulnerabilities in security config detected need remediation
- Policy to check for disk encryption
- Associate subnets with NSGs
- Review is auditing is applied
- Advise if security contact email needs to be added
- Set notifications for high sev alerts
- Audit open network access to storage accounts
- Add Azure AD administrator to SQL servers
- Encrypt SQL server TDE with own key
- Log profiles for Azure subscriptions
- Azure monitor collects logs from all regions
- Only approved VM extensions should be used
- API apps to use latest PHP version
- Web apps to use latest Java version
- More than one owner should be assigned to your subscription
- Implement delete and read only locks on resources
- Restrict region deployment
- Audit sql firewall rules for trusted IPs

Azure Advanced Security

What is it?

Inverto Azure Advanced Security is for when the baseline protection just isn't enough. It is designed to provide advanced solutions to areas that matter the most to you. Such as next gen firewall for your IaaS or Identity Management and protection for your Azure AD.

Azure Advanced Security

Who is it for?

Designed for businesses that understand they need to take a defence in depth approach to their critical resources. You don't need to be a security specialist to use the Advanced Security Plan because our security team are here to fully manage it all for you.

Azure Advanced Security

When should I use it?

Consider using Inverto Azure Baseline Security when...

- You need to enhance security in a specific area
- Strict compliance requirements
- You need to control security expenditure

Azure Advanced Security

Packages

The advanced plan is made of packages.
Our packages are...

- Database protection
- SIEM
- Security Centre
- Data Protection
- Cloud App Security
- Identity Protection
- NGFW
- Application Firewall
